Cover design by Jonathan Eric Freeman (d)

For 1993, the Journal of Magnetism and Magnetic Materials is scheduled to appear in 36 issues (12 volumes). The subscription price for 12 volumes is Dfl. 5736.00 (U.S. $3455.00), postage and handling included. The Dutch Guilder price is definitive; the currency equivalent is for your guidance only.

Subscriptions should be sent to the Publisher, *Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands,* or to any subscription agent or bookseller.

Journals are sent by surface delivery to all countries, except the following countries where SAL air delivery (Surface Airlifted Mail) is ensured: USA, Canada, Japan, Australia, New Zealand, The People's Republic of China, Israel, India, Brazil, Malaysia, Singapore, South Korea, Taiwan, Pakistan, Hong Kong, South Africa. Air mail rates for other countries are available upon request.

Claims for issues not received should be made within six months of publication, if they are to be honoured free of charge.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the written permission of the Publisher, Elsevier Science Publishers B.V., Copyright & Permissions Department, P.O. Box 521, 1000 AM Amsterdam, The Netherlands.

Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the Publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

Journal of Magnetism and Magnetic Materials Master Index (1993) 1
North-Holland

List of Proceedings published in this period

Volumes 76 & 77 (December II 1988): Proceedings of the 6th International Conference on Crystal-Field Effects and Heavy-Fermion Physics (18–21 July 1988, Frankfurt, Fed. Rep. Germany).

Volume 80, No. 1 (August I 1989): Proceedings of Symposium B on the Properties, Processing and Applications of Rare Earth, Iron-Rich, High Performance Permanent Magnets of the 1988 E-MRS Fall Conference (8–10 November 1988, Strasbourg, France).

Volume 84, No. 3 (March 1990); Proceedings of the Symposium on Magnetism and Applications of Rare-Earth Based Materials, in Memory of Professor R. Pauthenet (10 October 1989, Grenoble, France).

Volume 85 (April I 1990): Proceedings of the Fifth International Conference on Magnetic Fluids (18–22 September 1989, Riga, USSR).

Volumes 90 & 91 (December 1990): Proceedings of the Yamada Conference XXV on Magnetic Phase Transitions (13–16 April 1990, Osaka, Japan)

INFORMATION TO CONTRIBUTORS

Aim and Scope

The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS provides an important forum for the disclosure and discussion of original contributions covering the whole spectrum of topics from basic magnetism to the technology and applications of magnetic materials. The journal encourages greater interaction between the basic and applied sub-disciplines of magnetism with short but comprehensive review articles, short notes and a separate Letters to the Editor section – in addition to the more traditional contributions.

Invitation to Authors

The editors invite contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Instructions to Authors are available from the publishers. There are no publication charges and 25 reprints will be provided free of charge, with additional reprints available from the publisher at their normal prices.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Contributions to the **Letters** section should be sent in duplicate either to A.J. Freeman or to I.A. Campbell and simultaneously to the publisher. Letters may not exceed six pages when printed. The original copy, with figures for reproduction, should be sent to:

North-Holland (Elsevier Science Publishers B.V.)
c/o J.M. Hogendorp, P.O. Box 103, 1000 AC Amsterdam,
The Netherlands

SUBMISSION BY TELEFAX IS ENCOURAGED TO:

A.J. Freeman	*or*	I.A. Campbell
Department of Physics		Lab. de Physique des Solides
Northwestern University		Université de Paris-Sud
Evanston, IL 60208, USA		Bât. 510, 91405 Orsay Cedex
Fax: +1-708-4915082		France
Bitnet:		Fax: +33-1-69416086
art@freeman.phys.nwu.edu		Bitnet: Campbell@FRSOL11

Other contributions, written in English, should be sent in duplicate, preferably to one of the Editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case one copy plus the original figures should be sent simultaneously to A.J. Freeman. Submission of a paper will be taken to imply that it represents original work not previously published, that it is not being considered elsewhere for publication, and that if accepted for publication, it will not be published elsewhere in the same form, in any language, without the consent of the publisher.

All manuscripts will be refereed. They should be typed with double spacing and a wide margin. All pages should be numbered. Before mailing the manuscripts, please check the following points:

1. Title: The title should be chosen for its sufficient information content so that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. Abstract: The abstract of 100–150 words should contain all the substance of the methods and the results achieved.
3. Key words: These must be included with the manuscript before refereeing can begin.
4. Address: The name(s) of the author(s) and the name and address of the institution where the research work has been done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
5. Figures: The drawings for the figures must be submitted on separate sheets, either as good sharp photoprints (glossy prints), drawn in black indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Each figure should have an Arabic number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Figures will be returned after publication of the article.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the cost to the author is available from the Publisher.

6. Formulae: Displayed formulae should be numbered and typed, or clearly written by hand. Vectors will be printed in boldface italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script. Special attention should be paid to characters that can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, z, Z, p, P, ρ (Greek rho), etc.
7. Tables: Tables should be typed on separate sheets. Each table should have a Roman number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
8. References: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

For a book: D.J. Craik and R.S. Tebble, Ferromagnetism and Ferromagnetic Domains (North-Holland, Amsterdam, 1975) p. 160.

For a paper in a journal: M.A. Ruderman and C. Kittel, Phys. Rev. 168 (1968) 679.

For a paper in a contributed volume: A. Carrington, in: Magnetic Resonance and Radiofrequency Spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

For an unpublished paper: B.N. Harmon, Ph. D. Thesis, Northwestern University, United States (1973).

9. Footnotes: As far as possible, footnotes should be avoided.
10. Set headings over to the left, with only the first letter capitalised.
11. Units: Metric units are preferred. Acceptable abbreviations of units are given in the Style Manual of the American Institute of Physics and similar publications.
12. Authors will receive page proofs (including figures) by airmail for correction, which must be returned to the publisher within three days of receipt. Please ensure that a full postal address is given on the first page of the typescript, so that proofs are not delayed in the post. Please note that corrections of other than printer's errors may be charged.
13. Reprints: The publisher will supply, free of charge, 50 reprints without covers for each paper. Additional reprints may be ordered by completing the appropriate form sent with proofs.
14. There are no page charges.

Cover design by Jonathan Eric Freeman (d)

For 1993, the Journal of Magnetism and Magnetic Materials is scheduled to appear in 36 issues (12 volumes). Subscription prices are available upon request from the publisher.
Subscriptions should be sent to the Publisher, *Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands,* or to any subscription agent or bookseller.
Journals are sent by surface delivery to all countries, except the following countries where SAL air delivery (Surface Airlifted Mail) is ensured: USA, Canada, Japan, Australia, New Zealand, The People's Republic of China, Israel, India, Brazil, Malaysia, Singapore, South Korea, Taiwan, Pakistan, Hong Kong, South Africa. Air mail rates for other countries are available upon request.
Claims for issues not received should be made within six months of publication, if they are to be honoured free of charge.

Handbook of Magnetic Materials, Volume 7

edited by **K.H.J. Buschow**

©1993 676 pages Hardbound Price: Dfl. 410.00 (US $ 234.25)
Subscription price: Dfl. 348.50 (US $ 199.25) ISBN 0-444-89853-0

The Handbook of Magnetic Materials has a dual purpose. As a textbook it is intended to be of assistance to those who wish to be introduced to a given topic in the field of magnetism without the need to read the vast amount of literature published. As a work of reference it is intended for scientists active in magnetism research. To this purpose the handbook is composed of topical review articles written by leading authorities. In each of these articles an extensive description is given in graphical as well as in tabular form, much emphasis being placed on the discussion of the experimental material in the framework of physics, chemistry and materials science. Volume 7 of the Handbook of Magnetic Materials provides an overview of some of the most exciting topics in magnetism today.

Firstly, a substantial step forward in the understanding of metallic magnetism has been reached by means of electronic band structure calculation. Progress in this area has been made not only due to the availability of high speed computing machines but also due to sophistication in the computational methodology. In Volume 7 of the Handbook two chapters are devoted to this subject, one of which is devoted to the elements and the other dealing primarily with 4f and 5f systems, including examples of the large group of intermetallic compounds. In both chapters the authors have concentrated on explaining the physics behind these band calculations. The chapters are written in a manner understandable to scientists having no experience with band calculations.

Thin film technology has become a key issue in high density magnetic and magneto-optical recording and will be dealt with in future volumes of the Handbook. The present volume introduces the field with a chapter on the magnetism of ultrathin transition metal films, describing the richness in novel magnetic phenomens that has been encountered in the past few years in these materials. Of equal interest are the novel magnetic phenomena observed when magnetic moments are incorporated in a semiconducting matrix. A comprehensive description of these materials is found in the chapter on diluted magnetic semiconductors. A separate chapter is devoted to the progress made in the field of heavy fermions and valence fluctuations, emphasis being placed on the important results obtained by means of neutron scattering. A detailed review of the progress made in the field of rare earth based intermetallic compounds in combination with 3d transition metals completes this mulfaceted volume.

Contents: Preface. Contents of volumes 1-6. 1. Magnetism in ultrathin transition metal films *(U. Gradmann)*. 2. Energy band theory of metallic magnetism in the elements *(V.L. Moruzzi, P.M. Marcus)*. 3. Density functional theory of the ground state magnetic properties of rare earths and actinides *(M.S.S. Brooks, B. Johansson)*. 4. Diluted magnetic semiconductors *(J. Kossut, W. Dobrowolski)*. 5. Magnetic properties of binary rare-earth 3d-transition-metal intermetallic compounds *(J.J.M. Franse, R.J. Radwanski)*. 6. Neutron scattering on heavy fermion and valence fluctuation 4f-systems *(M. Loewenhaupt, K.H. Fischer)*. Author index. Subject index. Materials index.

TO ORDER

Contact your regular supplier or:

ELSEVIER SCIENCE PUBLISHERS

P.O. Box 103
1000 AC Amsterdam
The Netherlands
attn. Karien van der Harst

Customers in the USA and Canada:

ELSEVIER SCIENCE PUBLISHING CO. INC.

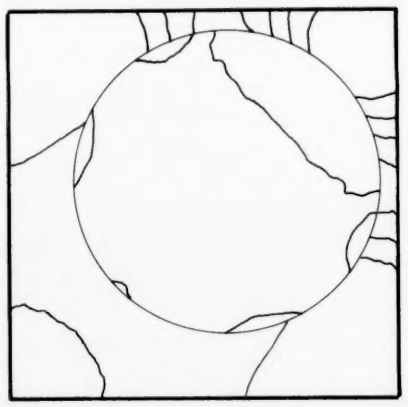
P.O. Box 882
Madison Square Station
New York, NY 10159, USA

No postage will be added to prepaid book orders. US $ book prices are valid only in the USA and Canada. In all other countries the Dutch guilder (Dfl.) price is definitive. Customers in the European Community should add the appropriate VAT rate applicable in their country to the price(s). In New York State please add applicable sales tax. All prices are subject to change without prior notice.

NORTH-HOLLAND

(AN IMPRINT OF ELSEVIER SCIENCE PUBLISHERS)

COMPUTATIONAL MATERIALS SCIENCE



proudly announces Volume 1, Number 3

a selection of the 20 articles:

Some simple models for micromechanical investigations of fiber arrangement effects in MMCs
H.J. Böhm, F.G. Rammerstorfer and E. Weissenbek

FE-modelling of the deformation behaviour of WC-Co alloys
M.H. Poech, H.F. Fischmeister, D. Kaute and R. Spiegler

Finite element modelling of a transverse-loaded fibre composite. Effects of section size and net density
M. Sautter, Ch. Dietrich, M.H. Poech, S. Schmauder and H.F. Fischmeister

Structure-property relations in duplex materials
T. Siegmund, E. Werner and F.D. Fischer

J-integral concept for multi-phase materials
D. Weichert and M. Schulz

The effect of interfacial sliding on the strength of metal matrix composites
D.B. Zahl

Modelling of scattering materials properties with stochastic finite element methods
S. Reh, A. Brückner-Foit and H. Riesch-Oppermann

Finite element modelling of crack propagation in ductile fracture
J. Wulf, S. Schmauder and H.F. Fischmeister

A numerical method for delamination in composites
H.M. Jensen

Two unique features:

Computer Videos

Authors are encouraged to submit computer videos accompanying their articles; these videos will be made accessible to the readers through the Computational Materials Science Video Library.

Electronic Bulletin Board

Associated with the journal an Electronic Bulletin Board is accessible free of charge. The Bulletin Board will provide information on:

- **programmes and subroutines supplied by authors**
- **data, such as structural coordinates or simulated time sequences pertaining to an article published in the journal**
- **contents of future issues**
- **items of further interest, including computer info, etc.**
- **conference calendar**

To receive the Bulletin Board free of charge, send an e-mail to cmp-soft@sci.funet.fi. On the subject line write subscribe (your name). The e-mail address will be automatically extracted. The body of the e-mail is of no significance. By writing 'help' on the subject line you receive more information about this service.

Subscription Information
1992-1993: Volume 1 (in 4 issues)
Price: US$ 222.00/Dfl. 368.00
including postage and handling costs
ISSN 0927-0256

The Dutch Guilder (Dfl.) price is definitive.
US$ price is subject of exchange rate fluctuations.

INFORMATION TO CONTRIBUTORS

Aim and Scope

The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS provides an important forum for the disclosure and discussion of original contributions covering the whole spectrum of topics from basic magnetism to the technology and applications of magnetic materials. The journal encourages greater interaction between the basic and applied sub-disciplines of magnetism with short but comprehensive review articles, short notes and a separate Letters to the Editor section – in addition to the more traditional contributions.

Invitation to Authors

The editors invite contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Instructions to Authors are available from the publishers. There are no publication charges and 25 reprints will be provided free of charge, with additional reprints available from the publisher at their normal prices.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Contributions to the **Letters** section should be sent in duplicate either to A.J. Freeman or to I.A. Campbell and simultaneously to the publisher. Letters may not exceed six pages when printed. The original copy, with figures for reproduction, should be sent to:

North-Holland (Elsevier Science Publishers B.V.)
c/o J.M. Hogendorp, P.O. Box 103, 1000 AC Amsterdam,
The Netherlands

SUBMISSION BY TELEFAX IS ENCOURAGED TO:

A.J. Freeman	*or*	I.A. Campbell
Department of Physics		Lab. de Physique des Solides
Northwestern University		Université de Paris-Sud
Evanston, IL 60208, USA		Bât. 510, 91405 Orsay Cedex
Fax: +1-708-4915082		France
Bitnet:		Fax: +33-1-69416086
art@freeman.phys.nwu.edu		Bitnet: Campbell@FRSOL11

Other contributions, written in English, should be sent in duplicate, preferably to one of the Editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case one copy plus the original figures should be sent simultaneously to A.J. Freeman. Submission of a paper will be taken to imply that it represents original work not previously published, that it is not being considered elsewhere for publication, and that if accepted for publication, it will not be published elsewhere in the same form, in any language, without the consent of the publisher.

All manuscripts will be refereed. They should be typed with double spacing and a wide margin. All pages should be numbered. Before mailing the manuscripts, please check the following points:

1. Title: The title should be chosen for its sufficient information content so that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. Abstract: The abstract of 100–150 words should contain all the substance of the methods and the results achieved.
3. Key words: These must be included with the manuscript before refereeing can begin.
4. Address: The name(s) of the author(s) and the name and address of the institution where the research work has been done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
5. Figures: The drawings for the figures must be submitted on separate sheets, either as good sharp photoprints (glossy prints), drawn in black indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Each figure should have an Arabic number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Figures will be returned after publication of the article.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the cost to the author is available from the Publisher.

6. Formulae: Displayed formulae should be numbered and typed, or clearly written by hand. Vectors will be printed in boldface italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script. Special attention should be paid to characters that can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, z, Z, p, P, ρ (Greek rho), etc.
7. Tables: Tables should be typed on separate sheets. Each table should have a Roman number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
8. References: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

For a book: D.J. Craik and R.S. Tebble, Ferromagnetism and Ferromagnetic Domains (North-Holland, Amsterdam, 1975) p. 160.

For a paper in a journal: M.A. Ruderman and C. Kittel, Phys. Rev. 168 (1968) 679.

For a paper in a contributed volume: A. Carrington, in: Magnetic Resonance and Radiofrequency Spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

For an unpublished paper: B.N. Harmon, Ph. D. Thesis, Northwestern University, United States (1973).

9. Footnotes: As far as possible, footnotes should be avoided.
10. Set headings over to the left, with only the first letter capitalised.
11. Units: Metric units are preferred. Acceptable abbreviations of units are given in the Style Manual of the American Institute of Physics and similar publications.
12. Authors will receive page proofs (including figures) by airmail for correction, which must be returned to the publisher within three days of receipt. Please ensure that a full postal address is given on the first page of the typescript, so that proofs are not delayed in the post. Please note that corrections of other than printer's errors may be charged.
13. Reprints: The publisher will supply, free of charge, 50 reprints without covers for each paper. Additional reprints may be ordered by completing the appropriate form sent with proofs.
14. There are no page charges.

J.M. HOGENDORP, Elsevier Science Publishers B.V. (North-Holland), P.O. Box 103, 1000 AC Amsterdam, The Netherlands

Journal of Magnetism and Magnetic Materials (ISSN 0304-8853). For 1994, Volumes 126–137 are scheduled for publication. Subscription prices are available upon request from the publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, China, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available upon request. Please address all your requests regarding orders and subscription queries to: Elsevier Science Publishers, Journal Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Telephone: +31-20-5803642, Telefax: +31-20-5803598. Claims for issues not received should be made within six months of our publication (mailing) date.

US mailing notice – The *Journal of Magnetism and Magnetic Materials* is published monthly except semimonthly in January, March, May, July, September and November (total 18 issues) by Elsevier Science Publishers, Molenwerf 1, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. The annual subscription price is US$ 3347 (valid in North, Central and South America only), including air speed delivery. Application to mail at second class postage rate is pending at Jamaica, NY 11431.

US POSTMASTERS: Send address changes to Journal of Magnetism and Magnetic Materials, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Airfreight and mailing in the USA by Publications Expediting.

Journal of Magnetism and Magnetic Materials Master Index (1993) 1
North-Holland

List of Proceedings and Special Issues published in this period

Volume 112 (July I 1992): Proceedings of the tenth International Conference on Soft Magnetic Materials (11–13 September 1991, Dresden, Germany)

Volume 113 (July II 1992): Selected papers from the International Colloquium on Magnetic Films and Surfaces (26–30 August 1991, Glasgow, Scotland)

Volume 115 No. 1 (September I 1992): Special Issue of the section Information Storage: Basic & Applied (IS:BA) with collected papers from various research institutions in China.

Volume 120 (March I 1993): Proceedings of the fifth International Conference on Magnetic Recording Media (2–4 September 1992, Perugia, Italy)

NEW TITLES IN MATERIALS SCIENCE

HANDBOOK OF MAGNETIC MATERIALS

edited by **K.H.J. Buschow**

Volume 7

Volume 7 provides an overview of some of the most exciting topics in magnetism today. Firstly, a substantial step forward in the understanding of metallic magnetism has been reached by means of electronic band structure calculation. Progress in this area has been made not only due to the availability of high speed computing machines but also due to sophistication in computational methodology. The chapters are written in a manner understandable to scientists having no experience with band calculations.

1993 about 700 pages
Price: US $ 234.25 / Dfl. 410.00
Subscription price: US $ 199.25 / Dfl. 348.50
ISBN 0-444-89853-0

HANDBOOK ON THE PHYSICS AND CHEMISTRY OF RARE EARTHS

edited by **K.A. Gschneidner, Jr.** and **L. Eyring**

Volume 16

Contents: Preface. Contents of Vols. 1-15. Chapters: 105. Valence-fluctuation and heavy-fermion 4f systems (M. Loewenhaupt, K.H. Fischer). 106. Thermal conductivity of rare earth compounds (I.A. Smirnov, V.S. Oskotski). 107. Rare earth pyrochlores (M.A. Subramanian, A.W. Sleight). 108. Crystal structures of rare earth minerals (R. Miyawaki, I. Nakai). 109. Appearance potential spectroscopy of lanthanides and their intermetallics (D.R. Chopra). Author index. Subject index.

1993 about 600 pages
Price: US $ 282.75 / Dfl. 495.00
Subscription price: US $ 240.50 / Dfl. 420.75
ISBN 0-444-89782-8

FULLERENE C_{60}

History, Physics, Nanobiology, Nanotechnology

by **D. Koruga, S. Hameroff, J. Withers, R. Loutfy** and **M. Sundareshan**

Contents: Parts: I. Science of Fullerene C_{60}. II. From Nanobiology to Nanotechnology. III. Fullerene C_{60}: Production, Technology, and Applications. References. Figure Sources. Glossary. Index.

1993 398 pages
Price: US $ 114.25 / Dfl. 200.00
ISBN 0-444-89833-6

ATOMIC COLLISIONS ON SOLID SURFACES

by **E.S. Parilis, L.M. Kishinevsky, N.Y. Turaev, B.E. Baklitzky, F.F. Umarov, V.K. Verleger, S.L. Nizhnaya** and **I.S. Bitensky**

This book reviews the theory of collisions of medium-energy atoms on the surface of a solid and the accompanying effects, namely, atom and molecule scattering, charge exchange, sputtering of atoms and large biomolecules, ion and electron emission. The topics covered include analytical theories and computer investigations which the authors have made over the past 30 years. Special attention is paid to the development of the models and mechanisms for the phenomena occurring at atomic collisions on solid surfaces.

1993 678 pages
Price: US $ 282.75 / Dfl. 495.00
ISBN 0-444-89105-6

ADVANCED LIGHT MICROSCOPY

by **M. Pluta**

Volume 3

Measuring Techniques

Volume 3 in this trilogy is fully devoted to microscopical metrology, with special emphasis on micrometry, stereology, microphotometry, microfluorometry, flow cytometry, metrology in polarized light, microinterferometry, optical diffractometry, and automatic analysis of microscopical images. A brief description of laser Doppler microvelocimetry is also given.

1993 718 pages
Price: US $ 242.75 / Dfl. 425.00
ISBN 0-444-98819-X

ELSEVIER
SCIENCE PUBLISHERS

CONDENSED MATTER AND MATERIALS SCIENTISTS

abstracts delivered directly to your desk every week

INSTITUTE OF PHYSICS PUBLISHING

There is now an electronic alerting service run jointly by Institute of Physics Publishing and Elsevier Science Publishers that delivers abstracts to you automatically every week.

Called CoDAS, the service uses the academic networks and includes simple search software so that you can find the information you need quickly without the usual complications of on-line and disc-based services.

With CoDAS you can set default searches that work the same way every week, alerting you to work in particular areas, or you can search interactively with full text searches on all titles, authors and abstracts. CoDAS is equally suited to mainstream condensed matter or materials scientists or more casual users who want to keep up to date but cannot afford to spend extended time in libraries.

- ☐ Keep up to date quickly and easily
- ☐ Catch papers in journals you would not normally see
- ☐ Print or download for personalised records
- ☐ Save or delete files quickly using simple file management software (including default settings)

Articles appear on CoDAS a short time before publication, typically 2–3 weeks, and full document delivery is planned starting with a number of journals on launch and gradually increasing in coverage.

CoDAS also allows you to catch up on publications quickly if you have been away – it allows searching on three weeks of data at once. There is an easy back-ordering facility if you find you have deleted data you need.

Anyone with access to the academic networks and an IBM-compatible PC running DOS 3.3 or higher with hard drive and at least a 286 processor can use CoDAS. The price is just US$85.00 a year. For details and information on a **free one-month trial subscription** contact Paul Bancroft at IOP Publishing, Techno House, Redcliffe Way, Bristol BS1 6NX, UK. Tel +44 272 297481, fax 294318, e-mail bancroft@ioppublishing.co.uk (s=bancroft; o=ioppl; prmd=iopp;admd=0; c=gb).

INFORMATION TO CONTRIBUTORS

Aim and Scope

The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS provides an important forum for the disclosure and discussion of original contributions covering the whole spectrum of topics from basic magnetism to the technology and applications of magnetic materials. The journal encourages greater interaction between the basic and applied sub-disciplines of magnetism with short but comprehensive review articles, short notes and a separate Letters to the Editor section – in addition to the more traditional contributions.

Invitation to Authors

The editors invite contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Instructions to Authors are available from the publishers. There are no publication charges and 25 reprints will be provided free of charge, with additional reprints available from the publisher at their normal prices.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Contributions to the Letters section should be sent in duplicate either to A.J. Freeman or to I.A. Campbell and simultaneously to the publisher. Letters may not exceed six pages when printed. The original copy, with figures for reproduction, should be sent to:

North-Holland (Elsevier Science Publishers B.V.)
c/o J.M. Hogendorp, P.O. Box 103, 1000 AC Amsterdam,
The Netherlands

SUBMISSION BY TELEFAX IS ENCOURAGED TO:

A.J. Freeman
Department of Physics
Northwestern University
Evanston, IL 60208, USA
Fax: +1-708-4915082
Email:
art@freeman.phys.nwu.edu

or

I.A. Campbell
Lab. de Physique des Solides
Université de Paris-Sud
Bât. 510, 91405 Orsay Cedex
France
Fax: +33-1-69416086
Email:
campbell@lps.u-psud.fr

Other contributions, written in English, should be sent in duplicate, preferably to one of the Editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case one copy plus the original figures should be sent simultaneously to A.J. Freeman. Submission of a paper will be taken to imply that it represents original work not previously published, that it is not being considered elsewhere for publication, and that if accepted for publication, it will not be published elsewhere in the same form, in any language, without the consent of the publisher.

All manuscripts will be refereed. They should be typed with double spacing and a wide margin. All pages should be numbered. Before mailing the manuscripts, please check the following points:

1. Title: The title should be chosen for its sufficient information content so that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. Abstract: The abstract of 100–150 words should contain all the substance of the methods and the results achieved.
3. Key words: These must be included with the manuscript before refereeing can begin.
4. Address: The name(s) of the author(s) and the name and address of the institution where the research work has been done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
5. Figures: The drawings for the figures must be submitted on separate sheets, either as good sharp photoprints (glossy prints), drawn in black indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Each figure should have an Arabic number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Figures will be returned after publication of the article.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the cost to the author is available from the Publisher.

6. Formulae: Displayed formulae should be numbered and typed, or clearly written by hand. Vectors will be printed in boldface italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script. Special attention should be paid to characters that can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, z, Z, p, P, ρ (Greek rho), etc.
7. Tables: Tables should be typed on separate sheets. Each table should have a Roman number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
8. References: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

For a book: D.J. Craik and R.S. Tebble, Ferromagnetism and Ferromagnetic Domains (North-Holland, Amsterdam, 1975) p. 160.

For a paper in a journal: M.A. Ruderman and C. Kittel, Phys. Rev. 168 (1968) 679.

For a paper in a contributed volume: A. Carrington, in: Magnetic Resonance and Radiofrequency Spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

For an unpublished paper: B.N. Harmon, Ph. D. Thesis, Northwestern University, United States (1973).

9. Footnotes: As far as possible, footnotes should be avoided.
10. Set headings over to the left, with only the first letter capitalised.
11. Units: Metric units are preferred. Acceptable abbreviations of units are given in the Style Manual of the American Institute of Physics and similar publications.
12. Authors will receive page proofs (including figures) by airmail for correction, which must be returned to the publisher within three days of receipt. Please ensure that a full postal address is given on the first page of the typescript, so that proofs are not delayed in the post. Please note that corrections of other than printer's errors may be charged.
13. Reprints: The publisher will supply, free of charge, 50 reprints without covers for each paper. Additional reprints may be ordered by completing the appropriate form sent with proofs.
14. There are no page charges.

Journal of Magnetism and Magnetic Materials (ISSN 0304-8853). For 1994, Volumes 126–137 are scheduled for publication. Subscription prices are available upon request from the publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, China, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available upon request. Please address all your requests regarding orders and subscription queries to: Elsevier Science, Journal Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Telephone: +31-20-5803642, Telefax: +31-20-5803598. Claims for issues not received should be made within six months of our publication (mailing) date.
US mailing notice – The Journal of Magnetism and Magnetic Materials is published monthly except semimonthly in January, March, May, July, September and November (total 18 issues) by Elsevier Science, Molenwerf 1, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. The annual subscription price is US$ 3347 (valid in North, Central and South America only), including air speed delivery. Second class postage rate is paid at Jamaica, NY 11431.
US POSTMASTERS: Send address changes to Journal of Magnetism and Magnetic Materials, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Airfreight and mailing in the USA by Publications Expediting.

INFORMATION TO CONTRIBUTORS

Aim and Scope

The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS provides an important forum for the disclosure and discussion of original contributions covering the whole spectrum of topics from basic magnetism to the technology and applications of magnetic materials. The journal encourages greater interaction between the basic and applied sub-disciplines of magnetism with short but comprehensive review articles, short notes and a separate Letters to the Editor section – in addition to the more traditional contributions.

Invitation to Authors

The editors invite contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Instructions to Authors are available from the publishers. There are no publication charges and 25 reprints will be provided free of charge, with additional reprints available from the publisher at their normal prices.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Contributions to the Letters section should be sent in duplicate either to A.J. Freeman or to I.A. Campbell and simultaneously to the publisher. Letters may not exceed six pages when printed. The original copy, with figures for reproduction, should be sent to:

North-Holland (Elsevier Science B.V.)
c/o J.M. Hogendorp, P.O. Box 103, 1000 AC Amsterdam,
The Netherlands

SUBMISSION BY TELEFAX IS ENCOURAGED TO:

A.J. Freeman	*or*	I.A. Campbell
Department of Physics		Lab. de Physique des Solides
Northwestern University		Université de Paris-Sud
Evanston, IL 60208, USA		Bât. 510, 91405 Orsay Cedex
Fax: +1-708-4915082		France
Email:		Fax: +33-1-69416086
art@freeman.phys.nwu.edu		Email:
		campbell@lps.u-psud.fr

Other contributions, written in English, should be sent in duplicate, preferably to one of the Editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case one copy plus the original figures should be sent simultaneously to A.J. Freeman. Submission of a paper will be taken to imply that it represents original work not previously published, that it is not being considered elsewhere for publication, and that if accepted for publication, it will not be published elsewhere in the same form, in any language, without the consent of the publisher.

All manuscripts will be refereed. They should be typed with double spacing and a wide margin. All pages should be numbered. Before mailing the manuscripts, please check the following points:

1. Title: The title should be chosen for its sufficient information content so that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. Abstract: The abstract of 100–150 words should contain all the substance of the methods and the results achieved.
3. Key words: These must be included with the manuscript before refereeing can begin.
4. Address: The name(s) of the author(s) and the name and address of the institution where the research work has been done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
5. Figures: The drawings for the figures must be submitted on separate sheets, either as good sharp photoprints (glossy prints), drawn in black indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Each figure should have an Arabic number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Figures will be returned after publication of the article.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the cost to the author is available from the Publisher.

6. Formulae: Displayed formulae should be numbered and typed, or clearly written by hand. Vectors will be printed in boldface italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script. Special attention should be paid to characters that can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, z, Z, p, P, ρ (Greek rho), etc.
7. Tables: Tables should be typed on separate sheets. Each table should have a Roman number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
8. References: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

For a book: D.J. Craik and R.S. Tebble, Ferromagnetism and Ferromagnetic Domains (North-Holland, Amsterdam, 1975) p. 160.

For a paper in a journal: M.A. Ruderman and C. Kittel, Phys. Rev. 168 (1968) 679.

For a paper in a contributed volume: A. Carrington, in: Magnetic Resonance and Radiofrequency Spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

For an unpublished paper: B.N. Harmon, Ph. D. Thesis, Northwestern University, United States (1973).

9. Footnotes: As far as possible, footnotes should be avoided.
10. Set headings over to the left, with only the first letter capitalised.
11. Units: Metric units are preferred. Acceptable abbreviations of units are given in the Style Manual of the American Institute of Physics and similar publications.
12. Authors will receive page proofs (including figures) by airmail for correction, which must be returned to the publisher within three days of receipt. Please ensure that a full postal address is given on the first page of the typescript, so that proofs are not delayed in the post. Please note that corrections of other than printer's errors may be charged.
13. Reprints: The publisher will supply, free of charge, 50 reprints without covers for each paper. Additional reprints may be ordered by completing the appropriate form sent with proofs.
14. There are no page charges.

GdTbFeCo — 126 (1993) 550
Gene transfer — 122 (1993) 329
Giant magnetoresistance — 121 (1993) 371, 374, 378, 386, 395, 399, 402, 416, 424, 429; 126 (1993) 255, 355, 390, 406, 410, 416, 419, 422, 433, 445, 448, 451, 454, 470, 485, 492, 495, 501, 508, 516, 521
– quantum model — 121 (1993) 366, 371, 449
Ginzburg–Landau model — 125 (1993) 120
Gorter model — 130 (1994) 367
Grain boundaries — 124 (1993) 31, 251; 129 (1994) L137, 415
Grain size — 126 (1993) 200; 127 (1993) L273
Green's function — 127 (1993) 359
Grinding and polishing — 122 (1993) 387, 428
Ground-state properties — 128 (1993) 83
Growth modes — 121 (1993) 1
Growth process — 126 (1993) 62, 245, 538

Hall effect — 126 (1993) 448, 498
– extraordinary — 121 (1993) 197
Hardness — 126 (1993) 200
Heat capacity — 129 (1994) 259
Heat transfer — 122 (1993) 294, 297, 301, 315
– magnetic field effect — 122 (1993) 305, 309, 312
Heat treatment — 122 (1993) 15; 125 (1993) 64
Heavy-fermion systems — 128 (1993) 289; 129 (1994) 10
Hele–Shaw cell — 122 (1993) 319
Hematite — 123 (1993) L27
Heteroepitaxy — 126 (1993) 210
Heterogeneous alloys — 126 (1993) 433
High-density recording — 126 (1993) 572
High-frequency response — 126 (1993) 556
High magnetic field — 121 (1993) 409
High pressure — 126 (1993) 192, 513
High resistive film — 126 (1993) 556
High-T_c superconductor — 126 (1993) 605; 127 (1993) 281
Hopkinson effect — 130 (1994) 92
HRTEM — 126 (1993) 55
Hubbard model — 125 (1993) 351
Hybridization — 124 (1993) 305
Hydrodynamic bearing — 122 (1993) 387
Hydrodynamic thickness — 122 (1993) 115
Hydrogen — 126 (1993) 102
Hydrogen absorption — 128 (1993) 365
Hydrogen decrepitation — 129 (1994) 263
Hydrogen uptake — 126 (1993) 612
Hyperfine fields — 123 (1993) L9; 124 (1993) 27, 31; 125 (1993) L29, 221, 290; 127 (1993) L278; 128 (1993) L255, 365; 129 (1994) 334; 130 (1994) L6

INFORMATION TO CONTRIBUTORS

Aim and Scope

The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS provides an important forum for the disclosure and discussion of original contributions covering the whole spectrum of topics from basic magnetism to the technology and applications of magnetic materials. The journal encourages greater interaction between the basic and applied sub-disciplines of magnetism with short but comprehensive review articles, short notes and a separate Letters to the Editor section – in addition to the more traditional contributions.

Invitation to Authors

The editors invite contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Instructions to Authors are available from the publishers. There are no publication charges and 25 reprints will be provided free of charge, with additional reprints available from the publisher at their normal prices.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Contributions to the Letters section should be sent in duplicate either to A.J. Freeman or to I.A. Campbell and simultaneously to the publisher. Letters may not exceed six pages when printed. The original copy, with figures for reproduction, should be sent to:

North-Holland (Elsevier Science B.V.)
c/o J.M. Hogendorp, P.O. Box 103, 1000 AC Amsterdam,
The Netherlands

Other contributions, written in English, should be sent in duplicate, preferably to one of the Editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research presented, in which case one copy plus the original figures should be sent simultaneously to A.J. Freeman. Submission of a paper will be taken to imply that it represents original work not previously published, that it is not being considered elsewhere for publication, and that if accepted for publication, it will not be published elsewhere in the same form, in any language, without the consent of the publisher.

All manuscripts will be refereed. They should be typed with double spacing and a wide margin. All pages should be numbered. Before mailing the manuscripts, please check the following points:

1. Title: The title should be chosen for its sufficient information content so that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. Abstract: The abstract of 100–150 words should contain all the substance of the methods and the results achieved.
3. Key words: These must be included with the manuscript before refereeing can begin.
4. Address: The name(s) of the author(s) and the name and address of the institution where the research work has been done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
5. Figures: The drawings for the figures must be submitted on separate sheets, either as good sharp photoprints (glossy prints), drawn in black indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Each figure should have an Arabic number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Figures will be returned after publication of the article.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the cost to the author is available from the Publisher.

6. Formulae: Displayed formulae should be numbered and typed, or clearly written by hand. Vectors will be printed in boldface italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script. Special attention should be paid to characters that can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ′ (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, z, Z, p, P, ρ (Greek rho), etc.
7. Tables: Tables should be typed on separate sheets. Each table should have a Roman number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
8. References: In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

For a book: D.J. Craik and R.S. Tebble, Ferromagnetism and Ferromagnetic Domains (North-Holland, Amsterdam, 1975) p. 160.

For a paper in a journal: M.A. Ruderman and C. Kittel, Phys. Rev. 168 (1968) 679.

For a paper in a contributed volume: A. Carrington, in: Magnetic Resonance and Radiofrequency Spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

For an unpublished paper: B.N. Harmon, Ph. D. Thesis, Northwestern University, United States (1973).

9. Footnotes: As far as possible, footnotes should be avoided.
10. Set headings over to the left, with only the first letter capitalised.
11. Units: Metric units are preferred. Acceptable abbreviations of units are given in the Style Manual of the American Institute of Physics and similar publications.
12. Authors will receive page proofs (including figures) by airmail for correction, which must be returned to the publisher within three days of receipt. Please ensure that a full postal address is given on the first page of the typescript, so that proofs are not delayed in the post. Please note that corrections of other than printer's errors may be charged.
13. Reprints: The publisher will supply, free of charge, 50 reprints without covers for each paper. Additional reprints may be ordered by completing the appropriate form sent with proofs.
14. There are no page charges.
